

NEXORA ENTERPRISE RESOURCE PLANNING

Connect every layer of your enterprise.

MISSION

To unify every operation through intelligent integration.

NEXORA exists to eliminate the barriers between departments -- connecting people, processes, and data into a single, coherent enterprise. We empower organizations to act as one, so that every decision is informed, every workflow is seamless, and every change is felt across the whole.

VISION

A future where no system stands alone.

We envision an enterprise world where information flows freely and without friction -- where a single update in one corner of an organization instantly strengthens the whole. NEXORA is building the infrastructure for that world: scalable, reliable, and built to grow alongside the people who depend on it.

CORE VALUES

Integration first

Every feature is designed with the whole system in mind — never in isolation.

Transparency

Data is visible, traceable, and honest — from the warehouse floor to the boardroom.

Reliability

When one-part changes, the rest adapts — no breakdowns, no blind spots.

Scalability

Built to handle growth — more departments, more users, more data.

Accountability

Every action is logged, every role is defined, every outcome is owned.

Collaboration

Eleven departments. One system. Shared success.

NEXORA Branding:

Primary — Navy core

	Deep Navy - #0B1E3D	Backgrounds, hero
	Navy - #132B52	Cards on dark background
	Navy Mid - #1B3A6B	Borders, dividers
	Corporate Blue - #1B6FC8	Primary buttons, links

Accent — Signal Blue

	Sky Blue - #4A9EE8	Highlights, icons
	Light Blue - #7BBEF0	Hover states
	Ice Blue - #D6ECFC	Light background tints

Neutral — Slate

	Off White - #F4F6FA	Page background
	Slate 200 - #E2E8F0	Table rows, borders
	Slate 500 - #5B7A9D	Secondary text
	White - #FFFFFF	Primary text on dark

Semantic — Status colors

	Success - #16A34A	Confirmed, active
	Warning - #D97706	Pending, caution
	Danger - #DC2626	Errors, critical
	Info - #0EA5E9	Notices, tooltips

Color usage rules

1. **Dark surfaces** - Use Deep Navy + Navy for sidebars, headers, login screens. Never mix with light neutrals in the same component.
2. **Actions** - Corporate Blue for all primary buttons, active nav items, and clickable links only. Don't use it decoratively.
3. **Highlights** - Sky Blue for icons, badges, data labels, and chart accents. It pops on both light and dark backgrounds.
4. **Light mode base** - Off White for page background. White for card surfaces. Slate 200 for table row alternates and input borders.

We are not building a business here. We are building an ERP platform.
NEXORA is not the company. NEXORA is the platform.

Company Name: NEXORA
Business: Techforge PC Solutions.

Scenario: Techforge PC Solutions would like to use NEXORA ERP.

Step 1: Company Registration

1. Create Company Account (fills up Company Name, Industry, Email, Phone and Admin Name)

Step 2: NEXORA Creates a Company

2. Company ID = CMP001
3. Company Name = Techforge PC Solutions
4. Company Logo (to be applied in e-commerce and other 10 departments)
This will become the Techforge's identity inside NEXORA.

Step 3: Admin Account Creation

Nexora automatically creates:
Username: miguel.admin
Role: Company Administrator
Juan receives login credentials.

Step 4: First Login

Miguel logs into the NEXORA ERP Dashboard. At this point, the ERP is empty.
No employees.
No products.
No customers.
No inventory.

Step 5: Populate Data

Now, the company simply enters:
5. HR adds employees (HR Manager, Warehouse Staff, Finance Officer, etc)
6. ITSM creates user accounts and assigns permissions.
7. Inventory module configures warehouses.
8. Procurement module adds suppliers.
9. E-commerce module adds products.
10. Inventory module adds initial stock.
11. and other modules will also start doing their tasks.
And then the business operation begins. Techforge is ready.

CUSTOMER PLACES AN ORDER:

12. Customer buys a GAMING PC Alpha from the Techforge's online store.
13. Nexora automatically coordinates everything.
 - o E-commerce creates order #1001
 - o Sales and CRM stores customer information

- Inventory checks component availability
- Manufacturing creates assembly request
- Procurement purchases missing parts
- Operations tracks fulfillment
- Finance generates invoice
- Compliance records audit trail
- Business Intelligence updates dashboards realtime
- ITSM logs user actions.

In this project, if other company uses our ERP, they would just get the same styles, design as the Techforge's online store. Same process, same flows. Just different staffs, different products, different company name and logo images.

REMINDERS:

1. We are building the same system (11 departments), not separate systems.
2. This is ONE ERP platform composed of 11 interconnected modules.
3. Each group is responsible for ONE module, but all modules must share data and communicate with one another.
4. If a customer places an order in the E-commerce module, that transaction should affect multiple modules such as Inventory, Procurement, Manufacturing, Finance, CRM, Operations, Compliance, Analytics and ITSM.
5. Groups should not work in isolation. Every group must identify:
 - a. What data they own
 - b. What data they receive from other modules.
 - c. What data they provide to other modules.
6. The goal of this project is to create an integrated ERP platform where business operations flow across multiple departments.
7. All modules must follow the same database structures, naming conventions, and integration rules agreed upon during Week 1.

MODULES OF NEXORA ERP:

1. Finance & Accounting
2. Procurement
3. Manufacturing / Production
4. Inventory & Warehouse
5. Human Resources
6. Sales & CRM
7. Order Fulfillment & Operations
8. Compliance & Risk Management
9. Business Intelligence & Analytics
10. E-Commerce
11. IT Service Management

Each module must be functional on its own but must also integrate with the other modules whenever applicable.

LAST REMINDER:

- TechForge PC Solutions is only our DEMO CLIENT COMPANY.
- Students are NOT building TechForge.
- Students are building NEXORA ERP.
- TechForge is simply the company that will be used to demonstrate and test the ERP platform during development and final presentation.

CLIENT REQUEST:

- The system design must be consistent across the ERP systems (except the E-commerce).
- There should be a gray themed background and blue themed background.

- Shared Authentication. Users should not need separate accounts for HR, Finance, Inventory, CRM and other modules. All authentication must be managed by the ITSM module.
- Role-based Access Control – different users must see different features.
 - HR can manage employees and view attendance. It cannot access financial reports.
 - Finance Manager can view invoices and financial reports but it cannot edit employee records.
- Audit Trail – All important actions should be recorded.
 - User login, product creation, order creation, inventory adjustment, invoice generation should always be recorded and be managed by ITSM and Compliance.
- The BI module must include an AI-powered analytics. The BI team gathers data from all modules and uses AI to generate executive summaries, insights and recommendations.
